

TREO[®]

ABDOMINAL STENT-GRAFT SYSTEM

Versatile by Design.
Fit for any Anatomy.*

*Per IFU.

The Next Evolution of EVAR Durability is Here

Highly flexible design for challenging, angulated anatomy

- ▶ Z-Stent Configuration
- ▶ Space between stents

Adjustable Leg Landing Zones Expand Planning & Treatment Flexibility

Particularly in Emergent EVAR Cases

~17% of annual EVAR procedures are emergent^{3, 4}

Adjustable zones allow you to maximize the iliac fixation length - a significant predictor of endograft migration⁵

Tailor Treatment to Each Patients' Anatomy

Longer Iliac **Fixation** Length Mitigates Migration

“The use of the TREO stent graft also allows for in situ limb length flexibility. Both ipsilateral and contralateral gates have 1 to 3 cm of docking overlap, allowing for treatment of a more continuous range of patient anatomies and accurate targeting of the distal landing zone.”⁶

0.67%
